

QuickPix: Customized job site ordering

Improve job site productivity.

Are you tired of dealing with paper requisitions and order forms? Do you struggle to track down the proper approvals prior ordering? Would you like to drive job site efficiency on projects or within your service fleets? Gexpro's *QuickPix* tool can solve your problems offering tablet accessibility for users on the go, as well as, browser-based access for office use.

Streamline and digitize ordering.

The *QuickPix* tool is designed to streamline and automate the job site ordering and requisition process. *QuickPix* features easy-to-use layouts for simple selection of the most common product groups and is configured specifically for each job. *QuickPix* can replace

traditional paper requisitions and order forms on your job site. In addition, with the availability of three approval levels, the approval process will provide the checks and balances you need. *QuickPix* even tracks purchased quantity versus your estimate. For further customization - Customer Part Numbers can be loaded into the tool. Users can build their order offline and submit to Gexpro once they have connectivity.

Three convenient ways to order.

25 *QuickPix* screens feature thousands of common items, which are mapped to your manufacturer preferences for each job. The catalog can be structured to restrict the ordering of non-specified items.

Item Lists - customized by project simplify ordering, and can include predetermined quantities. Item Lists also help facilitate ordering kits and Gexpro *GOcart* BOMs.

Write-In capability allows users to add items not loaded in *QuickPix* to their order as easy as if it were paper. This allows *QuickPix* to serve all your ordering needs.

Users immediately receive a copy of their order via email. The order is escalated automatically if additional approval is required. Once an order is "purchased" a copy is sent to the Gexpro Inside Salesperson for order fulfillment.

QuickPix Features

- Designed for iPad, Android and desktop devices
- Online and offline browser-based access
- Job specific BOMs loaded
- Role-based permissions
- Email alerts for approvals
- Orders emailed immediately
- Track purchases vs. estimates
